

The plot displays the ratio σ/σ_{tot} on the y-axis against the invariant mass M in GeV on the x-axis. The x-axis ranges from 0 to 30 GeV, and the y-axis ranges from 0 to 1. Data points with error bars are shown for Ghost (black), Electron (red), Muon (green), Pion (blue), Kaon (yellow), and Proton (purple). The ratio generally increases with mass, with a notable dip around 25-30 GeV.
